IRIS PHOTOGRAPHY TOOL

check out our Iris Photography Tutorial on youtube

Instructions ([video on youtube](#))

- 1. Print this page and page 2 on regular white paper**
This is for A4, you can also download
- 2. Cut away the right part of this template**
only cut the black dotted line, **not the red!!!**
throw away the right part
- 3. Cut away the inner rectangle**
I recommend to use a cutter, throw it away
- 4. Transfer the model on a black cardboard**
lay it on the paper and mark the parts you need to cut
Then cut the same parts
- 5. Cut the white rectangle bottom right**
and stick the cut out rectangle over the window on the black cardboard
- 6. Foam a roll with the black cardboard**
the white rectangle needs to be on the outside, fix it with adhesive tape
- 7. cut the red dotted lines of the template**
to save the environment,
we are going to reuse this template
- 8. Transfer the new template on a second black cardboard**
this time **don't cut away**
the inner rectangle
- 9. Foam a roll with the black cardboard**
fix the (slightly bigger roll)
with adhesive tape and pull it over
the first black cardboard roll
- 10. move the roll to partly cover the window**
that way you can adjust the reflection
in the iris
- 11. extend the inner roll when needed**
in case you get reflections from the
surroundings, extend with another roll
- 11. extend to:** close focus distance
of your lens + 2cm
